About

I'm a seasoned operations and process improvement specialist with over two decades of experience in the chemical industry. Alongside my core work in process optimization, I've also developed strong technical skills in web development. I create professional websites using HTML, CSS, and JavaScript, ensuring a seamless and visually appealing user experience.

In addition to my web development work, I specialize in creating efficient office solutions, such as automated shift planners, dynamic SPC control charts, KPI and OEE dashboards, and SAP automation using Excel VBA for seamless data imports and exports. As a certified Data Analyst, I leverage my expertise to enhance data-driven decision-making and operational efficiency. This unique combination of web development, office automation, and data analysis allows me to drive innovation, efficiency, and tangible results in both the digital and operational realms.
